

# Bill of lading operations in AceSuite.

Performing a **query** in AceSuite helps view the status and information of the bill and help determine your next action in a transmission. A CBP **hold** against the bill prevents future ABI transmissions.

## Common information CBP seeks in bills:

1. Scacs and bill reference number
2. Dates: schedule arrival dates are to be found an essential element, especially when cancelling an Inbond with an Entry
3. Does the Master Bill contain a House Bill?
4. Inbond numbers
5. Manifest quantities
6. Trip numbers: essential with airway and ocean bills
